

Sensenich "Saber" Now Available

Scimitar Blade
with Co-cured Metal
Leading Edge Protection

Fits Any Warp
Drive Hub

The new Sensenich "Saber" will fit into any Warp Drive hub configuration. This new prop features 20 percent more blade area for increased low end thrust without loss of snap. The scimitar blade shape helps to reduce noise signature.

Sensenich has incorporated an optimized composite lay-up to minimize "flattening out" under high thrust loading. This propeller runs extremely smooth due to the composite hollow construction which features our Patent Pending "I-Beam" manufacturing process.
